VOLUME CONTENTS

No. 1, September-October, 1964

Obituary—Wilton R. Earle.....	A. S. Parkes 1
Cryobiology.....	J. Levitt 3
Human Encounters with Cold, from Early Primitive Reactions to Modern Experimental Modes of Approach.....	B. J. Luyet 4
Cryobiology as Viewed by the Botanist.....	M. E. Burns 18
Cryobiology as Viewed by the Microbiologist.....	C. W. Cowley 40
Cryobiology as Viewed by the Engineer.....	Irving S. Cooper 44
Cryobiology as Viewed by the Surgeon.....	H. T. Meryman 52
Preservation of Blood by Freezing: A Review.....	H. M. Pyle 57
Glycerol Preservation of Red Blood Cells.....	M. J. Ashwood-Smith 61
The Preservation of Bone Marrow.....	D. E. Pegg 64
Freezing of Bone Marrow for Clinical Use.....	
Historical Development of Cell and Tissue Culture Freezing.....	
Lewis L. Coriell, Arthur E. Greene, and Ruth K. Silver	72
Freeze Preservation of Cultured Animal Cells.....	
Ward D. Peterson, Jr., and Cyril S. Stulberg	80
Freezing and Freeze-Drying of Microorganisms.....	Tokio Nei 87

No. 2, November-December, 1964

Freeze-Preservation of Protozoa.....	Louis S. Diamond 95
Low Temperature Research on Spermatozoa and Eggs.....	J. K. Sherman 103
The Freezing and Preservation of Animal Tumors.....	
Ira Kline and Robert-John Trapani	130
Histochemical Identification of Enzyme Activity in Frozen Tissues and Tumors.....	
P. J. Melnick	140
Freeze-Drying of Human Tissue for Clinical Use.....	R. B. Gresham 150
In Vitro Freezing of Whole Organs.....	
William G. Manax, Jack H. Bloch, Jerrold K. Longerbeam, Zwi Eyal, and Richard C. Lillehei	157
Some Effects of Freezing the Whole Rat Kidney <i>in Situ</i>.....	Irving M. Bush, Ernesto Santoni, Philip H. Lieberman, William G. Cahalan, and Willet F. Whitmore, Jr.
163	
Freezing of Whole Rat and Dog Kidney by Perfusion of Liquid Nitrogen through the Renal Artery.....	H. Schimmel, G. Wajener, C. Chatelain, and M. Legrain 171
Studies in Organ Preservation by Actual Freezing and Reduction of the Freezing Point.....	Stanley W. Jacob 176
In Vitro Preservation of Whole Organs by Hypothermia and Hyperbaric Oxygenation.....	
Richard C. Lillehei, William G. Manax, Jack H. Bloch, Zwi Eyal, Francisco Hidalgo, and Jerrold K. Longerbeam	181
Freezing and Thawing of Large Organs.....	
H. B. Lehr, R. B. Berggren, A. L. Summers, and P. A. Lotke	194

No. 3, January-February, 1965

The Present Status of Organ Freezing and Possible Future Recourses.....	Michael F. Dolan 199
Rapid Freezing of Human Blood. Physical and Chemical Considerations of Injury and Protection.....	G. F. Doeblner and A. P. Rinfrat 205
Acquired Tolerance to Homografts Induced with Dimethyl Sulfoxide-Protected and Frozen Splenic Cells.....	Ronald D. Guttmann and Vernon P. Perry 212
Viability of Fifty-Five Neoplasms after Storage in Liquid Nitrogen.....	
Isidore Wodinsky, Kathleen F. Meaney, and C. J. Kensler	217
Frozen Sectioning below -60°C with a Refrigerated Microtome.....	W. E. Stumpf and L. J. Roth 227
Protection of Lethally Irradiated Guinea Pigs with Fresh and Frozen Homologous Peripheral Blood Leukocytes.....	Vernon P. Perry, Theodore I. Malinin, Carey C. Kerby, and Michael F. Dolan 233
BRIEF COMMUNICATIONS	
Maintenance of <i>In Vitro</i> Growth Ability and Chromosome Integrity Following the Deep Freezing of Minced Fetal Tissue.....	Morton A. Stenchever, Joanne M. Hempel, and M. Neil Macintyre 240

Speculations Concerning Relationships between Chemical Protection against X-irradiation and the Protection of Cells from Freezing Damage	M. J. Ashwood-Smith 242
ABSTRACTS OF INTEREST	244
No. 4, March-April, 1965	
Prevention of Freezing Damage to Proliferating Cells in Tissue Culture. A Quantitative Study of a Number of AgentsO. Vos and M. C. A. C. Kaalen	249

Toxicity of Various Solute Moderators Used in Hypothermia	Armand M. Karow, Jr., and Watts R. Webb
The Freezing of Human Kidney Cell SuspensionsVernon P. Perry, Carey C. Kerby, Francis J. Kowalski, and Theodore I. Malinin	274
BRIEF COMMUNICATIONS	
A Cold-Labile Hemoglobin ComplexFred A. Andrews, Stephen M. Ashman, Rosalind Poole, and Johan Bjorksten	285
Thermoelectric Cooler for Whole Organ Freezing and Thawing	Paul A. Lotke and Michael F. Dolan
Mannitol as an Osmotic Antagonist to Dimethyl SulfoxideHendrick B. Barner	292
Virulence of <i>Trichomonas vaginalis</i> after Freeze-Preservation for 2 Years in Liquid Nitrogen Vapor ...Louis S. Diamond, I. Louise Bartgis, and Lucy V. Reardon	295
Pretreatment with Protective Substances as a Factor in Freeze-Thaw Survival	J. K. Sherman
ABSTRACTS OF INTEREST	298 301
No. 5, May-June, 1965	
Survival of Algal Cultures after Freezing by Controlled and Uncontrolled Cooling	Shuh-wei Hwang and Wanda Horneland
Thiogel—A Model System for Demonstrating Intermolecular Disulfide Bond Formation on FreezingJ. Levitt	312
A Calorimetric Method for Measuring Ice in Frozen Solutions	R. J. Williams and H. T. Meryman
An Analytical Approach to the Determination of Processing Techniques for the Low Temperature Preservation of Human ErythrocytesC. W. Cowley, J. A. Sawdye, and H. D. Robbins	324
Failure of Heat Reinforcement Performance by Trained Animals during HypothermiaJ. A. Panuska	334
BRIEF COMMUNICATIONS	
Temperature Gradients during Cooling and Freezing in the Human Brain	Irving S. Cooper and Guido Gioino
Cell Attachment Assay as a Measure of Thawed Cell Viability	J. H. Priest, L. K. Baxter, and R. E. Priest
ABSTRACTS OF INTEREST	348
INDEX	351

WILTON R. EARLE

1902-1964

Dr. Wilton R. Earle, an internationally known authority on the development of large scale, long-term tissue culture methods, and a founding member of the Society, died suddenly on May 30, 1964.

Born on June 22, 1902, in Greenville, South Carolina, Dr. Earle received his B.S. degree from Furman University in 1923, his M.S.

from the University of North Carolina in 1924, and his Ph.D. from Vanderbilt University in 1928. He was honored with the degree of Litt.D. by Furman University in 1962.

Dr. Earle began an uninterrupted career in the Federal Civil Service in 1928 as a Special Expert in Cytology and had been on the staff of the National Cancer Institute since its formation in

1937. Dr. Earle made many significant contributions to both the art and science of tissue culture. From his laboratories came such outstanding developments as the first cloning of single isolated cells, the first completely chemically defined media for the growth of cells, massive fluid suspension cultures, and many other no less significant advances in the field of cell and tissue culture. Perhaps his most significant contribution to the annals of science was his pioneering demonstration of the production of malignancy *in vitro*.

Dr. Earle was a strong influence in the formation of the Society, particularly regarding its publication, *Cryobiology*, and the mission of the Society: "to promote and disseminate research in the field of low temperature biology." His contributions will be acutely missed by the members of the Society.
